Heavy metals in dates (Phoenix dactylifera L.) collected from Medina and Dhaka Citymarkets, and assessment of human health risk

Reference: Chamon et al., Environmental Systems Research (2024) 13:27

This study investigated the levels of heavy metals in two date fruit varieties, Mariam and Dabash, from Bangladesh. The study found that both Mariam and Dabash dates contained concerning levels of cadmium (Cd) and nickel (Ni) that exceeded the maximum permissible limit. However, the average daily intake of these metals was not found to be associated with immediate health risks. The study also found that continuous consumption of Mariam date fruits from New Market may pose health risks, but did not identify any significant health risks associated with the consumption of Dabash dates, except for one location (Badamtali). Overall, the study suggests that long-term consumption of these contaminated fruits could pose health risks and that relevant authorities should take steps to ensure food safety.

EXTRA CURRICULAR
ACTIVITIES

[5 Dec 2024 - 31 Aug 2025]

Student Ambassador

I had the opportunity of working as a student ambassador for the Nature Positive University under the University of Oxford. During the program, i met several individual from different countries, and we mutually shared our work through modules arranged by the host organization.

[12 Dec 2024 - 1 Nov 2026]

Organizing Secretary
